

Appendix B: ABI Measurement Worksheet

Date: _____ Wound Location (if applicable) _____

Brachial Systolic Readings	Right Arm	Left Arm
Highest reading of the two arms is used to calculate ABI		

Dorsalis Pedis* Systolic Readings	Right Ankle	Left Ankle
Highest reading for each leg is used to calculate ABI		

Posterior Tibialis* Systolic Readings	Right Ankle	Left Ankle
Highest reading for each leg is used to calculate ABI		

*Use the peroneal/fibular artery if you are unable to determine the other two ankle systolic readings.

Calculation of ABI:

Right leg: $\frac{\text{Highest Right Ankle reading}}{\text{Highest Brachial reading}}$ = _____ (Rt Leg ABI)

Left leg: $\frac{\text{Highest Left Ankle reading}}{\text{Highest Brachial reading}}$ = _____ (Lt Leg ABI)

Signature: _____

ABI Next Due _____
